Introduction into HTML Basics

WHAT
HTML?

IS

Key Definition

HTML (HyperText Markup Language) is the standard language used to create and structure web pages. It defines the content and layout of a webpage using elements like headings, paragraphs, images, links, and forms.

1. HYPER TEXT MARKEUP LANGUAGE
2. NOT A programming Language

HTML

Tags Syntax

How to write code in html

1. Elements Surrounded by angle brackets (ex: `<p>` , `</a>`)
2. Normally comes in pairs (starting tag and closing tag)
3. Ending is the same as starting but with a forward slash
4. Some tags closes themselves

HTML Page Structure

An HTML page is structured to organize content and metadata for web browsers. It consists of a DOCTYPE declaration to specify the HTML version, a head section for metadata like the title and styles, and a body section that contains the visible content of the webpage. This structure ensures proper rendering and functionality across different devices and browsers.

```
<html>
```

```
<head>
```

```
<title>
```

```
</title>
```

```
</head>
```

```
<body>
```

CONTENT

```
</body>
```

```
</html>
```
